OTP (One Time Password) Generator

Swipe 

What is OTP?

One Time Password is a mechanism of using a unique code every time you try to sign-in to a platform.

This code is sent to you via email, phone number or can be found in apps like Google Authenticator.

It is more secure than a static password and helps keeping your account safe.

Source Code

Here's a simple code snippet to generator OTP.

```
1 function generateOTP() {  
2   const otpLength = 4;  
3   let otp = "";  
4  
5   for(let i = 0; i < otpLength; i++) {  
6  
7     otp += Math.floor(Math.random()*9)  
8  
9   }  
10  
11   return otp;  
12 }
```

Adjust this
value for OTP
Length

Converts
decimal value
e.g. 2.4 → 2

Gives a
random value
e.g. 2.4 ...
