TAILWIND CSS

Unleash the Power of Utility-First Styling
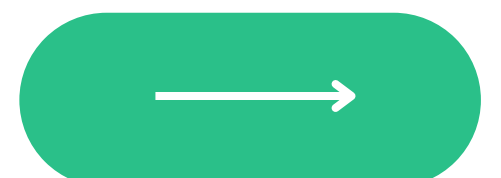

KAILASH G

Utility First Approach

- **Tailwind ditches pre-built components for a massive set of utility classes.**

- **Mix and match to style anything you can imagine. And create your designs.**

- **Examples. w-4, flex, grid, items-center etc....**

- **You can read more from their amazing documentation.**
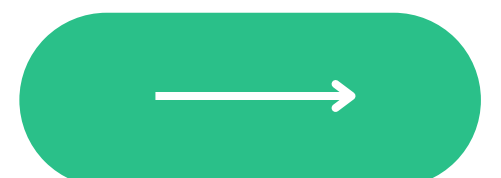

Rapid Prototyping

- Faster **UI Development**

- Skip writing lengthy CSS classes.

- Focus on building UIs with and layouts

- Just the Tailwind CSS and your amazing UI

Easy Responsive Design

- **Built-in Responsive Classes**

**Tailwind provides classes for various screen sizes (sm, md, lg, xl).**

- sm>= Small Screens

- md>= Medium Screens

- lg>= Large Screens

- xl>= Extra Large Screens

→

Consistent Styles

- **Maintain a Unified Look**

- **Everyone on your team uses the same Tailwind Classes.**

- **Ensuring your entire project and improving the user experience**

Example Code

```html
<div class="p-6 max-w-sm mx-auto bg-white rounded-xl shadow-lg flex items-center sp
  <div class="shrink-0">
    <img class="h-12 w-12" src="/img/logo.svg" alt="ChitChat Logo">
  </div>
  <div>
    <div class="text-xl font-medium text-black">ChitChat</div>
    <p class="text-slate-500">You have a new message!</p>
  </div>
</div>
```
